

Focus 80

High speed laminate tube line

The seamer includes features such as automatic splice, high frequency generator, and a high performance rotary cutter in order to avoid ovality and pinch marks. The patented innovative motion and loading system on the compression molding stations allows the line to produce tubes at speeds up to 250 tubes per minute.

The integrated capper is an autonomous 8-station unit with production line interface. A top seal device for the application of tamper evident membranes can be offered as an option.

The Focus 80 produces 250 tubes per minute and has become the standard line for oral care tube manufacturers.

Your Benefits

- Compression molding design produces 250 tpm
- Rotary cutter avoids ovality and pinch marks
- Optimized cost per output
- High efficiency
- Compact design

Technical Data

Tube Diameter	19 – 40 mm
Tube length	80 – 200 mm
Speed up to	250 tpm
Cap orientation	Yes
Splice table	Automatic

Other parameters available on request.
