

SDL

Swiss Downstream Line.

The Swiss Downstream Line – SDL is, as the name implies, a complete downstream line for plastic closure production. The line, developed with our Swiss partner IMD, is a one-stop-shop for closure drop from mold to box. The processes include inspection, slitting and folding.

The compact and standardized layout is easy for technicians to operate and results in increased efficiency. A single control center (HMI) for the whole line, driven by the IMDvista® V5 Vision Control Center, enables operators to have a perfect production and performance overview. The design has also made the line easier to use, which in turn results in higher user efficiency.

- Up to 2,000 caps/minute
- Standard machine, small footprint
- Ethernet-based interface on single HMI
- No layout change if mechanical updates needed
- Ideal for small/start-up businesses

Technical data

Cap diameter	26 – 38 mm*
Cap height	10 – 24 mm*
Speed up to	800 – 2,000 cpm
Material	PP or HDPE*

*Other height, diameter or material on request.
