

# Collapsible Aluminum Tube Production Lines

*Cost efficient, turnkey solutions.*

- Production speed up to 210 tubes/minute
- Able to test the machine in one location before shipment
- Special know-how in clean room installations for pharmaceutical tube production

PackSys Global offers complete production lines for collapsible aluminum tubes and is presently the only company making all machines in the line in-house, except for the extrusion press. PackSys Global is thus able to take responsibility for the speed of the entire line when it is maintained per agreed guidelines and service conditions. This gives customers complete confidence in having one point of contact for all their needs: machine upgrades, service on all parts of the line, etc. Furthermore, PackSys Global is unique in being able to test the machine in one location before shipment.

Mindful of the industry's concerns for efficiency and environmental considerations, our Swiss engineered equipment addresses these issues. Our reliable lines provide customers the confidence to consistently and cost effectively produce aluminum tubes to the highest quality, while meeting all industry standards.

PackSys Global has delivered lines to all markets across the world and has special know-how in clean room installations for pharmaceutical tube production, in particular for the Japanese market.

## Which line to choose?

### Low speed

120 tpm

Ideal for:

- Markets with special requirements
- Tube producers who need small batch capacities with quick changeover capabilities

### Medium speed

165 tpm

Ideal for:

- Markets seeing good demand for collapsible aluminum tubes
- Tube producers who are looking to expand their capacity to tap into this industry growth

### High speed

210 tpm

Ideal for:

- Markets seeing exponential growth for collapsible aluminum tubes
- Large tube producers who are looking to add capacity or replace old equipment to optimize their production cost
