

# Trim to Print, T2P System

Web Position Control

PSS/2022/OCT/EN

## Your Benefits

- Corrects floating print position on the web
- Minimizes visual irregularities on seam area (Polyline)

## The effect of the Trim to Print

The standard web guide system controls the web position according to the web edge. Due to variations of the lateral print position in respect to the web edge the web might not get trimmed where it should. To overcome this, the operator has adjust the web position from roll to roll or even on the same roll. Here the Trim2Print system offers the possibility to enhance the process with automatic adjusting the web position according features on the print.

## Demand for best tube quality

Customer quality requirements are constantly increasing. Having a perfect print passage on the tubes seam area is here key for a perfect visual appearance.

## System consists of

- T2P operating panel
- T2P Triple Axis Webguide
