

Check-Up Plastic Closures

Enhancing machine
productivity.

Your Benefits

- Maximize process reliability
- 10% discount on service parts recommended from a Check-Up
- Minimize risk of unexpected downtime
- Present customers documented proof of service

Planned and structured check-ups for your plastic closure equipment minimize unexpected downtime, thereby maximizing your productivity. Optimized production is essential for your profitability. PackSys Global provides a check-up service to ensure optimal productivity of your machines. so it is only done a few times each day. If defective closures are found during this process, the closures produced since the last laboratory check are normally scrapped. On the highest speed lines the quantity produced between laboratory checks can exceed 1 million closures.

Trained field engineers inspect your PackSys Global cap equipment efficiency.

The check-up includes checking and cleaning of the parts and sensors on the machine. Further we will optimize the machine parameters and settings for a even better machine performance.

This standardized procedure enables you to compare the machine's productivity year-on-year or against other machines.

Check-Up details

- Check and / or cleaning of the lubrication system
- Sensors functionality
- Check mechanical parts of additional equipment / components (belt, blower, etc.)
- Optimize machine parameters and settings
- Preparation of additional repair work, if required
- Recommendations of preventive measures to secure continuous production flow
- Recommendations for optimal stock of spare parts
- Standardized procedures to compare machine productivity
- Documented proof of service and condition of the machine

Duration of check-up

The check-up requires a planned downtime of one day per machine. An additional half day is used to optimize the control settings and supervise the production process.

Pricing

Our fixed rates enable better cost planning. In addition you will benefit from a 10% discount on service parts recommended from the assessment.

Our proven expertise

Our highly qualified and experienced field engineers are regularly trained. They have performed several checkups to complete customer satisfaction for many years.

Get the latest equipment

Upon your request we offer new automation kits and solutions to bring the machine in line with the latest safety, productivity, and operating standards.

Check-Up & Maintenance

While disassembling the machine, it often makes sense to fix and refurbish the machine at the same time. In consultation with you, PackSys Global will gladly offer this option.
